PROBABILITY

DIVYA SAI - FWC22094

16.4.10 ¹The number lock of a suitcase has 4 wheels each labelled with ten digits i.e. from 0 to 9.The lock opens with a sequence of four digits with no repeats. What is the probability of a person getting the right sequence to open the suitcase?

Solution:

Let, the wheels be $X=\{0,1,2,3\}$ and the digits be $Y=\{0,1,2...9\}$. Possible placement of digits are,

$$^{10}P_4 = \frac{10!}{(10-4)!} = \frac{10!}{6!} = \frac{10 \times 9 \times 8 \times 7 \times 6!}{6!} = 5040$$
 (16.4.10.1)

Let A be the event the correct sequence is selected So,n(A)=1.

Probability of correct sequence is selected as P(A),

$$P(A) = \frac{n(A)}{n(s)} = \frac{1}{5040}$$
 (16.4.10.2)

The probability of getting the right sequence to open the suitcase is $\frac{1}{5040}$
